

Fake Email

- send fake email
- pretend to be a friend
- looks like its sent from any address

★ Easiest way is to go on google → spoof emails online
→ There are a lot of sites that will do it. But this sends the mail to SPAM folder

★ A better solⁿ is to use a SMTP service.

↳ look for a free service online.

↳ we'll use Brevd.

★ Go to Transactional to get SMTP details.

★ In kali Terminator use → sendemail --help

↳ # sendemail -xu {login-username}
-xp {password} -s {server}:{port}

→ this authenticates to email server

→ you now can put fake from email (existing)

Continue from here

» -f "{from email}" -t "{to email}"
-u "{Title of email}" -m "{Message Body}"

Say you upload your trojan to dropbox or any host. Upload it as well. (copy its link)

» # paste link in message body

★ Spoofing sender name:

- continue

>> - O MESSAGE - header = "From: {name you want}
<{from email}>"

→ send it.

★ Another method to spoof emails: (using php)

→ requires a web hosting plan

→ you can use any plan to do it.

→ we won't cover it here.
